THE GUATEMALAN ANTS.

They Destroy Cotton Boll Worms and Other Injurious Insects.

Washington, July 16 .- O. F. Cook, the discoverer of the Guatemalan boll weevil eating ants has wired the department of agriculture from Texas that the new ants are destroying cotton boll worms and are attacking similar injurious insects with even greater avidity than they do the boll weevil. Another important fact is that the ants do not injure at all the ladybird larvae, which are beneficial insects. Mr. Cook reports that the agricultural value of the ants now depend chiefly upon acclimitization and rapidity of propagation. These matters are being investigated.

Lost \$10,000 Bill.

Nearly 15 years ago a man entered the First national bank of Denver and walked into the office of David H. Moffatt, the president of the bank. He had a bottle in his hand that he said contained nitroglycerin, and threatened to blow up the bank unless he was given a large sum of money. Mr. Moffatt sent for the money and among the bills was one of \$10,000 denomination. Recently the government called in all \$10,000 bills and the one given by Mr. Moffatt is the only one that has not been presented for redemption. No trace of the man who got the money was ever found.

A Wonderful Spider Web.

In the Pacific ocean there is a group of islands called the New Hebrides, where there is a species of spider that weaves a fine cloth. What do you think of that? The natives place a slight framework in some dark corner where there are known to be spiders, and the little insects immediately take possession of the frame and use it as a foundation for a web, with marvelous results. One cap made in this way by spiders was over four feet ten inches long, and over a foot in diameter at the base.

Where Most Wheels Go Around,

There is no place in the world where the wagon or cart traffic is equal to that of Newchwang. During the winter months, when the roads are firmly frozen, there are not less than 2,000 carts, each carrying two tons per day, coming to the port, each drawn by from four to seven mules or ponies: some of these carts are from 30 to 40 days on the road in order to reach the market.

Bank-Note Paper.

The Bank of England note is not of the same thickness throughout. It is thicker in the left-hand corner, so as to retain a keener impression of the vignette there, and it is also thicker in the dark shadows of the center letters and beneath the figures at the ends. Counterfeit notes are thus quickly detected, as they are invaiably of the same thickness throughout.
